

Company Profile

A close-up photograph of a person's hand gently placing a small green seedling into dark, rich soil. The hand is positioned on the left side of the frame, with fingers carefully supporting the plant. The soil is dark brown and appears moist. In the background, another similar seedling is visible, slightly out of focus. The overall lighting is soft, highlighting the textures of the skin, the leaves of the plant, and the granules of the soil.

Since its initiation, IQV has been focused on providing phytosanitary solutions that are effective, efficient and respectful of the environment.

We are committed to continuous improvement in everything we do and to offering quality products and services that are fully tailored to each market's needs.

We take on all the challenges presented to us and turn them into profitable solutions.

## TAKING CARE OF CROPS

AND MORE .....▶

MAT HOLDING GROUP

IQV is part of the Mat Holding Group, a business group that develops and delivers effective, efficient and sustainable solutions for crop protection, agricultural irrigation and water treatment and conduction. It also offers services and structures to enhance the business activity and competitiveness of all its customers.

Mat Holding believes in a sustainable economy that allows for a better quality of life through respect for the environment and the rational use of natural resources. We therefore define ourselves as a responsible and socially committed company that stands firmly by its values: trust in people, dynamism, continuous improvement and humility.

We make future projects grow

## IQV

IQV started out in 1935 by producing copper salts for the protection of crops; which led us to achieve and maintain a leading position worldwide.

Over time, we have expanded our catalogue of products and services in order to help customers increase the profitability of their businesses, providing them with solutions to meet their needs.

Thus, given our inherent commitment to agriculture and business, we now focus completely on the market, anticipating change with total flexibility.

1935

We are a sound company with sustained growth

today ...

PRODUCTOS

Product range

IQV is an expert in the synthesis of copper salts and the formulation of products based on copper, metalaxyl and other active materials to manufacture fungicides, herbicides, insecticides and other agricultural and animal feed products.

We manufacture technical products and formulations in WP, WG, EC, SC, GR, SL, etc.

We are also proud to be able to manufacture products for other companies in the phytosanitary sector, thereby helping them to achieve their goals.

Own brands ®

With our own brands now present in several countries around the world, we bring added value to the product by differentiating it and facilitating its marketing through its recognised quality.

Tailor-made products

At IQV we always strive to meet our customers’ needs. We draw on our extensive experience in the phytosanitary sector to formulate products that are fully tailored to their requirements.

We develop profitable solutions

SERVICES

IQV is totally market-oriented and this is why we believe in continuous improvement to achieve business excellence. To this end, we are constantly adapting our services to improve our customer’s experience and increase their satisfaction. We also wish to reaffirm the trust of our customers and collaborators.

We manufacture for third party companies and offer a wide range of services to cover their needs and enhance their business activities as though they were our own.

We foster long-lasting relationships
